Abstracts

Superalloy blisk is a kind of blisk made of superalloy material, typically titanium or a nickel based alloy. Superalloy blisk is a key component of the aero-engine. By designing the blades and discs of the traditional structure into a unitary structure, the boring head, the gutter and the locking device used in the traditional connection method are eliminated, the weight of the structure is reduced, the number of parts is reduced, and the number of parts is avoided. The loss of airflow greatly simplifies the overall structure of the engine, and the thrust-to-weight ratio and reliability are significantly improved.

Based on the Superalloy Blisk market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail.
