## **Abstracts**

Textile surfactants play an important role in textile industry as one of the chemicals to enhance the manufacturing process. In industry, textile surfactants are used as antistatic, untangling and softening agents in different processes of textile manufacturing such as scouring, lubrication, dyeing and finishing. Textile surfactants contain both water loving (hydrophilic) and water hating (hydrophobic) parts. Based on hydrophilic part, textile surfactants are segmented into anionic, cationic, non-ionic and amphoteric surfactants. Anionic surfactants such as carboxylates, sulphonates and alkyl ether phosphates are used as dye dispersants; cationic surfactants such as alkylamine ethoxylates and quaternary ammonium compounds are used for fabric softening; non-ionic surfactants such as ethoxylates, fatty acids ethoxylate, fatty alcohol ethoxylates and fatty amine ethoxylates are used as washing/dispersing agents, whereas amphoteric surfactants are applied in combination with cationic or anionic surfactants. Based on the Surfactants in Textile and Fibre market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail.
