Abstracts

Synthetic aperture radar, also called as SAR, is used for creation of two-dimensional or three-dimensional reconstruction of a landscape or an object. It is commonly space borne or airborne radar system that generates remote sensory image with high resolution. This system gathers data of the flight path to stimulate aperture or large antenna electronically. Synthetic aperture radar operates similar to phased array. But instead of large number of parallel antennas, synthetic aperture radar uses one antenna in time multiplex.

The report combines extensive quantitative analysis and exhaustive qualitative analysis, ranges from a macro overview of the total market size, industry chain, and market dynamics to micro details of segment markets by type, application and region, and, as a result, provides a holistic view of, as well as a deep insight into the Synthetic Aperture Radar market covering all its essential aspects.

For the competitive landscape, the report also introduces players in the industry from the perspective of the market share, concentration ratio, etc., and describes the leading companies in detail, with which the readers can get a better idea of their competitors and acquire an in-depth understanding of the competitive situation.
