Abstracts

Synthetic aperture radar, also called as SAR, is used for creation of two-dimensional or three-dimensional reconstruction of a landscape or an object. It is commonly space borne or airborne radar system that generates remote sensory image with high resolution. This system gathers data of the flight path to stimulate aperture or large antenna electronically. Synthetic aperture radar operates similar to phased array. But instead of large number of parallel antennas, synthetic aperture radar uses one antenna in time multiplex.

Based on the Synthetic Aperture Radar market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.

In Chapter 2.4 of the report, we share our perspectives for the impact of COVID-19 from the long and short term.
