Abstracts

A tail lift is a mechanical device installed on the rear of a work truck, van, or lorry, and is designed to facilitate the materials handling of goods from ground level or a loading dock to the level of the vehicle bed, or vice versa. The majority of tail lifts are hydraulic or pneumatic in operation.

Using a tail lift can make it unnecessary to use machinery such as a forklift truck to load heavy items on to a vehicle. A tail lift can also bridge the difference in height between a loading dock and the vehicle load bed. Tail lifts are available for many sizes of vehicle, from standard vans to articulated lorries.
