Abstracts

Tamping machine, also known as ballast tamping machine, is a heavy-duty machine used in tamping or packing of track ballasts underneath railway tracks, helping to make the track more durable.

Before the introduction of a tamping machine, manual workers were usually required to perform this task with the help of a beater. With the introduction of modern tamping machines, they are able to line and tamping tracks, and align railway tracks in parallel, and make tasks efficient, faster, more accurate and less labor intensive. This can reduce the mechanical stress on the rails and provide a more comfortable ride experience for freight and passenger trains.
