Fire-rated glass and glass products are subjected to a range of tests to ensure viability in emergency situations; much like personal safety gear, fire-rated glass is designed to withstand even the most dangerous environments, and testing helps to determine the expected performance and fire rating for glass types. Individual glass ratings are based on the duration for which the material can withstand extreme heat, as well as the thermal shock the material can endure when cold water from fire hoses or sprinklers comes into contact with the super-heated surface.
