## Abstracts

The textile industry generates large quantities of waste from desizing of fabrics, bleaching chemicals, and dyes. This contributes largely to environment pollution. In such circumstances, textiles enzymes are used to foster the development of environmentally-friendly technologies in fiber processing and improving the final product quality. Enzymes are increasingly used in textile processing, largely in the finishing of fabrics and garments. Significant applications include desizing and jeans finishing. Major groups of enzymes used for cotton pre-treatment and finishing processes include hydrolase and oxidoreductase.

Based on the Textiles Enzymes market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.
