Abstracts

The laminator is a device that fuses two pieces of plastic together with paper in between. Hot lamination machines are a kind of laminator that make use of plates or rollers to do the job. Most hot laminators function with the user inserting a material, usually paper, into a lamination pouch. The pouch is then run through the machine to fasten the lamination to the material through heat and pressure. The pouch has an optional laminating carrier which is useful in protecting the document from being damaged by too much heat.
