## Abstracts

In thermoforming process, thermoforming films are transformed into the desired design of molds either by pressure molding or vacuum forming technology. Thermoforming technology is suitable for manufacturing of PA/EVOH based multilayer films and containers thus providing efficient packaging solution without hampering the barrier properties of the packaging. Thermoforming films are an effective solution for storage of food products which has helped thermoforming films to gain popularity in packaging industry within a short span of time. The type and design of the thermoforming films can be easily obtained according to the industrial requirement by changing the thickness of the thermoforming sheet.
