## Abstracts

Due to the presence of blackbody radiation, any object radiates electromagnetic waves depending on the temperature. The part with a wavelength of 2.0 to 1000 microns is called thermal infrared. Thermal infrared imaging can reflect the temperature field of the surface of the object by imaging the object with a thermal infrared sensitive CCD. Thermal infrared has a wide range of applications in military, industrial, automotive assisted driving, and medical fields. Thermography Software offers an expanded set of sophisticated controls for generating more comprehensive thermal imaging inspections and research reports. Record and play back radiation video files and time/temperature maps, etc.

Based on the Thermography Software market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.
