Abstracts

Thermoplastic composites (TMCs) evolved from structural polymer composites. While structural polymer composites (e.g. epoxy and polyester thermosetting resins reinforced with continuous filaments or fibres greater than 10mm in length) had many beneficial properties such as low density, good mechanical properties combined with good insulation and environmental resistance, they suffered from chemical instability, i.e. the impregnated intermediate or prepreg has a limited shelf life.

The report combines extensive quantitative analysis and exhaustive qualitative analysis, ranges from a macro overview of the total market size, industry chain, and market dynamics to micro details of segment markets by type, application and region, and, as a result, provides a holistic view of, as well as a deep insight into the Thermoplastic Composites market covering all its essential aspects.

For the competitive landscape, the report also introduces players in the industry from the perspective of the market share, concentration ratio, etc., and describes the leading companies in detail, with which the readers can get a better idea of their competitors and acquire an in-depth understanding of the competitive situation.
