Abstracts

Thermoplastic composites (TMCs) evolved from structural polymer composites. While structural polymer composites (e.g. epoxy and polyester thermosetting resins reinforced with continuous filaments or fibres greater than 10mm in length) had many beneficial properties such as low density, good mechanical properties combined with good insulation and environmental resistance, they suffered from chemical instability, i.e, the impregnated intermediate or prepreg has a limited shelf life.

Based on the Thermoplastic Composites market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.

In Chapter 2.4 of the report, we share our perspectives for the impact of COVID-19 from the long and short term.

In chapter 3.4, we provide the influence of the crisis on the industry chain, especially for marketing channels.
