Abstracts

Thermoplastic elastomers (TPEs) possess both elastomeric and thermoplastic characteristics. They are produced from thermoplastics and elastomers and can be segregated based on their constituent materials. TPE can be remolded, reshaped, and recycled. Therefore, they are extensively used to replace conventional materials, such as polyvinylchloride (PVC), natural rubber, nitrile rubber (NBR), and ethylene propylene diene monomer (EPDM) in major industries.

Based on the Thermoplastic Elastomers (TPEs) market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.

In Chapter 2.4 of the report, we share our perspectives for the impact of COVID-19 from the long and short term.

In chapter 3.4, we provide the influence of the crisis on the industry chain, especially for marketing channels.
