## Abstracts

TPU belongs to a class of thermoplastic elastomers that are long-chain linear polymers, which allow the polyurethane to be melted to form parts and then the parts are solidified. The usage of TPU in medical applications is consistently increasing, owing to its high-performance characteristics, resistance to chemicals and oils, improved mechanical properties, and enhanced durability. Melt-processable polyurethanes are used to make catheters, such as central-venous access catheters, over-the-needle IV catheters and multi-lumen catheters.
