Tissue valves are most often made with tissues from porcine (pig) heart valves or bovine (cow) cardiac tissue. When you have a tissue heart valve, you do not need to take lifelong blood-thinner medication (unless you have another condition that makes this medication necessary).

Tissue valves are not as durable as mechanical valves. Clinical studies show that tissue heart valves may last from eight to 20 years, depending on their position.^{1,2} (In these studies, aortic valves have tended to last longer than mitral valves.) How long the valve lasts depends on the type of tissue valve, your age, lifestyle, medication requirements and other factors.

The Tissue Heart Valves market revenue was xx Million USD in 2016, grew to xx Million USD in 2020, and will reach xx Million USD in 2026, with a CAGR of xx during 2020-2026.
