Abstracts

Tissue valves are most often made with tissues from porcine (pig) heart valves or bovine (cow) cardiac tissue. When you have a tissue heart valve, you do not need to take lifelong blood-thinner medication (unless you have another condition that makes this medication necessary).

Tissue valves are not as durable as mechanical valves. Clinical studies show that tissue heart valves may last from eight to 20 years, depending on their position.1,2 (In these studies, aortic valves have tended to last longer than mitral valves.) How long the valve lasts depends on the type of tissue valve, your age, lifestyle, medication requirements and other factors.

Based on the Tissue Heart Valves market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields.
