## Abstracts

Traveling wave tube is a kind of electron tube that uses continuous interaction between electron flow and electromagnetic wave traveling along slow wave system to amplify ultra-high frequency electromagnetic wave. It is mainly composed of electron gun, slow wave system and collector electrode. The commonly used slow wave system is a spiral and comb structure. It is characterized by a wide frequency band and low noise. It is suitable for medium and small power amplifiers. A traveling wave tube whose electromagnetic wave travels in the opposite direction of the electron flow, called a return wave tube, can be used as a wide-band microwave oscillator.
