Abstracts

True wireless earbuds use Bluetooth connectivity to transmit the audio signal by radio waves from source devices like cellphones and digital players. Moreover, true wireless earbuds have no cable at all to connect to phone or any other device – and, unlike wireless earbuds, there's no cable to connect each bud to the other either. Once the lid is off, it can be connected and seamlessly switched. Ultra-long battery life, environmental monitoring, voice assistant, automatic connection and other functions are also available. This makes true wireless buds extremely flexible and convenient. True wireless earbuds usually adopt wireless charging, also known as “Qi Wireless Charging”, which works via electromagnetic induction.

The report combines extensive quantitative analysis and exhaustive qualitative analysis, ranges from a macro overview of the total market size, industry chain, and market dynamics to micro details of segment markets by type, application and region, and, as a result, provides a holistic view of, as well as a deep insight into the True Wireless Earbuds market covering all its essential aspects.
