Abstracts

A tugboat is a ship that drives or tows large container ships, tankers and cruise ships in or around docks and ports. These ships are also used to maneuver disabled boats and other non-self-propelled ships, such as oil platforms. Tugboats are also used to guide large vessels in lateral movements in narrow oceans and ports. Due to their powerful engine capacity, tugs are also used as icebreakers and salvage vessels - they can break through a meter of ice.
