Abstracts

A turboexpander is a centrifugal or axial turbine through which high pressure gas is expanded to produce work typically used to drive a compressor or generator. Since the work is extracted from the expanded high pressure gas, the expansion approximates the isentropic process, and the low pressure exhaust from the turbine is at a very low temperature, -150 ° C or lower, depending on the operating pressure and the properties of the natural gas. Partial liquefaction of the expanding gas is not uncommon.

The Turbo Expander market revenue was xx Million USD in 2016, grew to xx Million USD in 2020, and will reach xx Million USD in 2026, with a CAGR of xx during 2020-2026.
