## Abstracts

A turboexpander is a centrifugal or axial turbine through which high pressure gas is expanded to produce work typically used to drive a compressor or generator. Since the work is extracted from the expanded high pressure gas, the expansion approximates the isentropic process, and the low pressure exhaust from the turbine is at a very low temperature, -150 ° C or lower, depending on the operating pressure and the properties of the natural gas. Partial liquefaction of the expanding gas is not uncommon.
