## Abstracts

Turpentine oil is a chemical which is combusted for energy recovery. Turpentine oil is derived during the process of kraft wood pulping and is widely sold as a commodity material. The process separates the cellulose fibers that are utilized in paper manufacturing. Turpentine oil is a fuel which contains several organic compounds such as beta-pinene, alpha-pinene and certain terpenes. Turpentine oil works as a feedstock chemical in the manufacture of flavorings, pinenes, pine oil, polymer additives and fragrances. It is also used as a commercial source of fuel and as an alternative of fossil fuels in a broad range of applications such as furnaces, rocket fuels and industrial boilers. Turpentine oil has a low heating coefficient ranging between 16,000 & 18,000 Btu/lb as compared to other fossil fuels such as gasoline, diesel, butane and propane. The report combines extensive quantitative analysis and exhaustive qualitative analysis, ranges from a macro overview of the total market size, industry chain, and market dynamics to micro details of segment markets by type, application and region, and, as a result, provides a holistic view of, as well as a deep insight into the Turpentine Oil market covering all its essential aspects.
