Abstracts

Turpentine oil is a chemical which is combusted for energy recovery. Turpentine oil is derived during the process of kraft wood pulping and is widely sold as a commodity material. The process separates the cellulose fibers that are utilized in paper manufacturing. Turpentine oil is a fuel which contains several organic compounds such as beta-pinene, alpha-pinene and certain terpenes. Turpentine oil works as a feedstock chemical in the manufacture of flavorings, pinenes, pine oil, polymer additives and fragrances. It is also used as a commercial source of fuel and as an alternative of fossil fuels in a broad range of applications such as furnaces, rocket fuels and industrial boilers. Turpentine oil has a low heating coefficient ranging between 16,000 & 18,000 Btu/lb as compared to other fossil fuels such as gasoline, diesel, butane and propane. Based on the Turpentine Oil market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail.
