Abstracts

Ultrafine copper powder refers to small copper powder with a particle size of 10-9 to 10-6 m, including nano copper particles and micro copper particles. It is brown or purple micro powder. Because of its small particle size, large specific surface area and high activity, ultrafine copper powder should be stored in inert gas or organic solvent to prevent oxidation.

Ultrafine copper powder is an indispensable basic raw material of nano copper, which has good conductivity and high strength. Because of its excellent electrical properties, it is widely used in conductive adhesives, conductive coatings and electrode materials. In recent years, it has been found that it can be used to manufacture catalysts, lubricating oil additives, and even to treat osteoporosis and fracture.

The report combines extensive quantitative analysis and exhaustive qualitative analysis, ranges from a macro overview of the total market size, industry chain, and market dynamics to micro details of segment markets by type, application and region, and, as a result, provides a holistic view of, as well as a deep insight into the Ultrafine Copper Powder market covering all its essential aspects.
