## Abstracts

UV curing is a photochemical reaction that occurs upon exposure to high intensity, ultraviolet light. UV curing materials are usually one component mixtures that offer many benefits to traditional room temperature or heat curing chemistries. UV curable materials offer many benefits compared to room temperature or heat curing chemistries. They are primarily used for the protection and sealing of electronics, glass, metal, plastic, and ceramics. UV curing materials are typically solvent-free, one part systems that require no mixing or purging.
