## **Abstracts**

Unmanned underwater vehicles (UUV) are self-propelled vehicles, typically deployed from a surface vessel without any human operator onboard. These vehicles are designed to operate independently (or by a remote controller) for periods ranging from a few hours to several days. UUVs have received significant attention worldwide and increasingly being widely used across numerous applications. Some of the popular applications of UUV include surveillance, reconnaissance, mine countermeasures, ocean floor mapping, pipeline inspection, polar ice research, anti—submarine warfare and several others.
