## Abstracts

A UV functional coating refers to a coating that is cured using UV radiation. 'Functional coating' describes a system that has additional functionality in addition to the classic properties of the coating (ie, decoration and protection). This additional function can be varied and depends on the actual application of the coated substrate. Typical examples of functional coatings are self-cleaning, antistatic, anti-reflective and anti-bacterial, while typical expectations for functional coatings include durability, reproducibility, ease of application and cost effectiveness, customized surface morphology and environmental friendliness.
