## Abstracts

A UV functional coating refers to a coating that is cured using UV radiation. 'Functional coating' describes a system that has additional functionality in addition to the classic properties of the coating (ie, decoration and protection). This additional function can be varied and depends on the actual application of the coated substrate. Typical examples of functional coatings are self-cleaning, antistatic, anti-reflective and anti-bacterial, while typical expectations for functional coatings include durability, reproducibility, ease of application and cost effectiveness, customized surface morphology and environmental friendliness.

Based on the UV Functional Coating market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields.
