Abstracts

Vacuum Suction Cups, also known as vacuum spreaders, are generally the cheapest method of grabbing products using vacuum chucks. Vacuum chucks are available in a variety of styles. Suction cups made of rubber can be operated at high temperatures. Suction cups made of silicone rubber are ideal for gripping rough surfaces; suction cups made of polyurethane are durable. In addition, in actual production, if the suction cup is required to have oil resistance, it is conceivable to use a material such as polyurethane, nitrile rubber or vinyl-containing polymer to manufacture the suction cup. Generally, in order to prevent the surface of the article from being scratched, it is preferable to select a suction cup with a bellows made of nitrile rubber or silicone rubber.
