## Abstracts

Vacuum Suction Cups, also known as vacuum spreaders, are generally the cheapest method of grabbing products using vacuum chucks. Vacuum chucks are available in a variety of styles. Suction cups made of rubber can be operated at high temperatures. Suction cups made of silicone rubber are ideal for gripping rough surfaces; suction cups made of polyurethane are durable. In addition, in actual production, if the suction cup is required to have oil resistance, it is conceivable to use a material such as polyurethane, nitrile rubber or vinyl-containing polymer to manufacture the suction cup. Generally, in order to prevent the surface of the article from being scratched, it is preferable to select a suction cup with a bellows made of nitrile rubber or silicone rubber.

Based on the Vacuum Suction Cups market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.
