Abstracts

Vanilla Beans are long thin pods from a variety of orchid that's grown in a commercial scale in Madagascar, India, Indonesia, Puerto Rico and the West Indies. When opened, the pods are waxy and dark, filled with little brown specks and emit a sweet fragrance. There are three types of vanilla beans: Bourbon-Madagascar, Mexican and Tahitian. Bourbon-Madagascar vanilla is a thin pod with a rich and sweet flavor, the sweetest of the three. Mexican vanilla tastes smooth and rich, while Tahitian vanilla has the thickest and darkest-colored pod that's aromatic but not as flavorful as the two. Vanilla beans have no flavor or aroma when they are first planted. Once vanilla pods are handpicked from the plant, they are dipped immediately in boiling water to stop growth, heated under the sun and wrapped to sweat at night for up to 20 days. To develop that distinct vanilla scent and taste, pods are air-dried and fermented for four to six months, producing the vanilla beans most of us are familiar with.

Based on the Vanilla Beans market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.

In Chapter 2.4 of the report, we share our perspectives for the impact of COVID-19 from the long and short term.

In chapter 3.4, we provide the influence of the crisis on the industry chain, especially for marketing channels.

In chapters 8-13, we update the timely industry economic revitalization plan of the country-wise government.
