Abstracts

The live attenuated varicella vaccine is a freeze-dried varicella attenuated live virus OKA strain of not less than 103.3 PFU. The live attenuated varicella vaccine is a lyophilized product obtained by breeding varicella virus (OKA strain) on human diploid cells. This product is a suspension for subcutaneous injection: the lyophilized vaccine pellet is milky white to pale yellow or light pink loose in a glass vial, and the diluent is a colorless clear liquid. The live attenuated varicella vaccine is used for active immunization of individuals who have never been infected with chickenpox to prevent infection with varicella virus.
