Abstracts

Vertical centrifugal pumps are also known as cantilever pumps. They feature a unique shaft and bearing support structure that can be suspended in the pump when the bearing is outside the pump. This type of pump does not use a stuffing box to seal the shaft, but instead uses a 'throttle bushing'. A common application for such pumps is in part washers. A centrifugal pump containing two or more impellers is called a multistage centrifugal pump. The impellers can be mounted on the same shaft or on different shafts.
