## Abstracts

Video Surveillance as a Service is a web-hosted wireless security system that allows users to remotely store, manage, record, play and monitor surveillance video - completely in the cloud. The lens is not stored in the field, users do not need to record software, only IP camera system, Internet connection and VSaaS provider. How does VSaaS work? VSaaS is a remote method for video surveillance systems, not a live video security system. With VSaaS, the IP camera is installed in the desired location and the security lens is transmitted to the provider's site. Because VSaaS is managed in the cloud, users can access footage or cameras from anywhere on the desktop, laptop or mobile device.
