## Abstracts

Vigabatrin is a GABA derivative that is used in combination with other agents as therapy of refractory complex partial seizures and as monotherapy for infantile spasms.

Vigabatrin is associated with a paradoxical decrease in serum enzyme levels during therapy, explained by its direct inhibition of aminotransferase activity. Vigabatrin has not been convincingly linked to cases of clinically apparent liver injury, but was linked to a fatal case of Reye syndrome in a child with severe developmental delay.

The report combines extensive quantitative analysis and exhaustive qualitative analysis, ranges from a macro overview of the total market size, industry chain, and market dynamics to micro details of segment markets by type, application and region, and, as a result, provides a holistic view of, as well as a deep insight into the Vigabatrin market covering all its essential aspects.
