Abstracts

Vinyl record, also known as bakelite record refers to the phonograph record with a speed of 78 rpm, a sound groove width of 0.10-0.16 mm, and a sound groove density of 30-50 per centimeter. Vinyl records are the names of ordinary people who used to play discs in the past. The record is a black disc-shaped film, originally made of graphite, which is then pressed with shellac and engraved with bumps to record sound.

Based on the Vinyl Records market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.

In Chapter 2.4 of the report, we share our perspectives for the impact of COVID-19 from the long and short term.

In chapter 3.4, we provide the influence of the crisis on the industry chain, especially for marketing channels.
