Abstracts

Virtual Pipeline Systems are arranged shipments of gas from one point to another, either overland in containers by rail or road, or by water, in ocean-going or coastal tankers and barges. Virtual pipeline systems supply natural gas to industries that are either too geographically challenging to justify an investment in pipeline construction or too small for normal LNG large-scale carriers. Virtual pipeline systems supply natural gas to industries, electricity generation plants, and commercial & residential customers almost anywhere that are accessible by road or sea.

Based on the Virtual Pipeline System market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields.
