Abstracts

Virtual sports betting is the newest innovation in the larger sports betting industry. Conducting sports events virtually — via computer software — is opening up a whole new avenue for sportsbooks and bettors around the world.

Virtual sports are essentially video games where computer software plays out sporting events, races or contests. Advanced algorithms determine the outcome; they account for the skill of the participants as well as the luck elements inherent in real-world sporting events.

The computer-generated graphics of the virtual sports are usually advanced and look much like you would see on current-generating gaming consoles, but short of watching a television broadcast.

Virtual sports have gained traction as a way for sportsbooks to offer action without needing a real-world event on which to take wagers, increasing the velocity of bets they can take.

Based on the Virtual Sports Betting market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.

In Chapter 2.4 of the report, we share our perspectives for the impact of COVID-19 from the long and short term.

In chapter 3.4, we provide the influence of the crisis on the industry chain, especially for marketing channels.

In chapters 8-13, we update the timely industry economic revitalization plan of the country-wise government.
