Abstracts

Virtual reality glasses or goggles are becoming increasingly popular in the gaming and entertainment spheres. They are lighter and more comfortable to wear than the standard head mounted display (HMD) and many of them incorporate a range of interactive devices. Examples of these include audio, video and head tracking. These glasses behave in a similar way to a pair of 3D goggles in that they display two images. Ordinary glasses show a single image but 3D and virtual reality glasses contain polarised lenses which show two images, one per each eye. These images appear to give an illusion of depth which is a particular feature of CAVE environments.

The report combines extensive quantitative analysis and exhaustive qualitative analysis, ranges from a macro overview of the total market size, industry chain, and market dynamics to micro details of segment markets by type, application and region, and, as a result, provides a holistic view of, as well as a deep insight into the Vr Glasses market covering all its essential aspects.
