Abstracts

A container resembling a drum, with curved sides, and circular top and bottom is known as barrel.

In addition, several industries use barrel as a unit measurement that defines how much material can be held inside a round, large container.

In warehouse context, the former definition applies more often than the latter. A barrel is defined as a large cylindrical container. It is usually made of staves bound together with hoops, featuring flat top and bottom of equal diameter. It is often called a drum because of its similarity to cylindrical containers made of metal.
