Abstracts

Preserved fruit, also known as candied fruit, is a food made of peach, apricot, plum, jujube, mango, wax gourd, ginger and other fruits and vegetables, preserved with sugar or honey. The candied fruit technology includes such production links as salting, rinsing, steaming, sauce making, molding, drying, drying, sugar making, seasoning, desalination, dehydration, etc. The wastewater during the processing of preserved fruit mainly comes from the processes of washing, peeling, canning, sealing, sterilization, equipment and appliance washing, etc. The wastewater comes from the raw material treatment equipment, sterilization, cleaning water for various containers and equipment, etc

The production wastewater of preserved fruit refers to the wastewater generated by enterprises during production, such as soaking water, pickling water, sterilization circulating water, equipment cleaning water, container cleaning water, site cleaning water, staff living water, and other drainage water. Candied fruit production wastewater contains fruit pulp, sugar, citric acid, sweeteners, preservatives, natural spices, food pigments, etc
