Abstracts

Water Hardness Removal removes calcium, magnesium and certain other metal cations from hard water. Since no soap is wasted to remove calcium ions, the resulting soft water requires less soap for the same cleaning work. Soft water can also extend the life of the pipe by reducing or eliminating scale build-up in pipes and fittings. Water softening is typically achieved using lime softening or ion exchange resins, but is increasingly being achieved using nanofiltration or reverse osmosis membranes.

The report combines extensive quantitative analysis and exhaustive qualitative analysis, ranges from a macro overview of the total market size, industry chain, and market dynamics to micro details of segment markets by type, application and region, and, as a result, provides a holistic view of, as well as a deep insight into the Water Hardness Removal market covering all its essential aspects.
