## Abstracts

Water Hardness Removal removes calcium, magnesium and certain other metal cations from hard water. Since no soap is wasted to remove calcium ions, the resulting soft water requires less soap for the same cleaning work. Soft water can also extend the life of the pipe by reducing or eliminating scale build-up in pipes and fittings. Water softening is typically achieved using lime softening or ion exchange resins, but is increasingly being achieved using nanofiltration or reverse osmosis membranes. Based on the Water Hardness Removal market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.

In Chapter 2.4 of the report, we share our perspectives for the impact of COVID-19 from the long and short term.
