Water trucks are commonly used in mining applications, primarily for dust control. Water trucks usually consist of a series of spray nozzles equipped with the mechanics to pump and spray water to remove overburden or to hydrate mines when they become dry. The trucks are different from a typical truck in that they must be able to contain a large volume of water, requiring special tank specifications and mounting apparatuses to include spray nozzles and associated equipment.

Today, however water trucks are also used for various other reasons. The construction industry uses them for compaction, dust control and fire-prevention and protection. The entertainment industry also uses water trucks for street wet downs, fire control stand-by and many other reasons. Water trucks are used also used by the fire-fighting industry in battling forest fires.
