## Abstracts

Waterproof breathable textiles (WBT), as the name depicts, are employed in the manufacture of garments that are weather-proof, i.e., which prevent the passage of water and heat from the fabric. These textiles prevent both penetration and absorption of water, unlike water-repellent fabrics that only delay water penetration. These waterproof breathable textiles permit the flow of water vapor (perspiration) from inside the clothing to the outer atmosphere. However, these textiles prevent penetration of heat or water from outside to inside the fabric. The waterproof breathable textiles market can be bifurcated on the basis of product type into densely woven, coated, and membranes. On the basis of end-user industry, the market for waterproof breathable textiles can be segmented into garments, footwear, and gloves.

The report combines extensive quantitative analysis and exhaustive qualitative analysis, ranges from a macro overview of the total market size, industry chain, and market dynamics to micro details of segment markets by type, application and region, and, as a result, provides a holistic view of, as well as a deep insight into the Waterproof Breathable Textiles (Wbt) market covering all its essential aspects.
