Abstracts

Coffee plants produce red cherries which contain two halves of a bean. The red cherries are harvested and the outer layer of the red cherry is removed leaving two halves or two whole beans. Whole in this sense indicates that the two halves have not been ground. Whole bean coffee is the recommended state that coffee should be in when purchased to guarantee freshness. However, because it requires grinding before brewing, some consumer opt for a more convenient option and purchase the beans pre-ground trading convenience for a small but notable decrease in flavor.
