Abstracts

Wiper blade is a device for keeping windows clean, and when they sweep water, it passes back and forth through the windshield. A wiper blade is mainly composed of a pivot sleeve, two end rings, spring steel plates and rubber strips. The spring steel plate in the wiper blade spreads the pressure throughout, so that all parts of the wiper blade are subjected to an average force, eliminating rain marks and scratches on the windshield. Wiper blades can be used for a longer period of time, with uniform force, sun protection, simple structure and light weight.
