## **Abstracts**

An electric discharge machine (EDM) is used in the manufacturing process to obtain the desired shape by removing material from the workpiece. During this process, a rapidly repeating current is discharged between the two electrodes, which cuts the material into the desired shape and the remaining material is separated by the dielectric liquid. Based on the Wire Electrical Discharge Machine (EDM) market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.

In Chapter 2.4 of the report, we share our perspectives for the impact of COVID-19 from the long and short term.
