A wireless connection means not connecting to a computer network through any type of cable. The use of wireless networks enables businesses to avoid the expensive process of introducing cables into buildings or as connections between different device locations. The basis of a wireless system is radio waves, which is an implementation that takes place at the physical level of the network structure. Wireless connections use radio waves to connect devices such as laptops to the Internet, business networks and applications. When the laptop is connected to a Wi-Fi hotspot in a public place, a connection to the company's wireless network is established.

The Wireless Connectivity market revenue was xx Million USD in 2016, grew to xx Million USD in 2020, and will reach xx Million USD in 2026, with a CAGR of xx during 2020-2026.
